Thilot Holland—Flexible Solutions in Production

Interesting facts:

- All-in-One complete production facility for lead-time reduction
- Design, manufacturing & service
- Experienced & Qualified people
- Customer driven
- Single item production

Skills & Expertise

- Design&Drafting **1**
- Storage&Sawing **2**
- Machining **3**
- Construction **4**
- Sheet metal **5**
- Sheet metal cutting **6**
- Spray painting **7**
- Assembly **8**

Meet us...

Welcome to our company!

Thilot Holland is a well-known, long established Dutch construction company, located in the south-east of the Netherlands.

Our company has its roots in producing agricultural tools and implements for local farmers.

Nowadays our main business is machines, equipment and installations for composting and mushroom growing companies. On this field we are a world wide leader, generally recognized for delivering top-quality products all over the world.

We strive to broaden our manufacturing base by acting as a co-maker of parts and complete machines for the OEM industry.

Let us give you an idea of the capabilities of our manufacturing plant.

With a strong commitment to openness and collaborative creativity, we at Thilot Holland develop solutions together with our customers. In other instances, we fabricate to their specifications and design, parts and components.

We provide you with engineering services and manufacturing capabilities for streamlining your own production.

Technology

Competence

Solutions

Customer designed bag handling unit

1-Design & Drafting

Our design engineers make the necessary drawings not only for our own machines but also for customers bringing in a requirement. 3D-design software in combination with various CAM-modules for interaction with our manufacturing shop, guarantee an efficient and cost effective production.

2-Storage & Sawing

In this section we store various sizes and qualities of flat and round bars as well as tubes and metal profiles needed for construction works. The maximum diameter for sawing profiles is 200 mm. A 5 ton overhead crane simplifies unloading of suppliers bringing in raw materials.

Examples of Thilot's products

3-Machining

The machining department is equipped with various lathes, milling and drilling machines.

Maximum space between centers: 3500 mm. Maximum machine bed milling: 2000*730 mm. Maximum lift capacity: 2000 kg.

4-Construction

Equipped with 2 overhead cranes with a capacity of 5 tons each and a floor area of 50*20 mtr., we are able to carry out your larger construction works efficiently. Skilled and experienced welders are available for welding mild and stainless steel.

5-Sheet metal

We carry a large stock of mild and stainless steel sheets in a variety of thicknesses up to 100 mm.

Shears with a maximum length of 3 mtr. and 12 mm capacity as well as press brakes of 3000 mm and 200 tons are at your service.

6-Sheet metal cutting

Oxy/fuel and watercutting machines are extensively used for own needs as well as customers requiring swift delivery of single or small series of components. Both the oxy/fuel and watercutting machine can take sheets up to 3*2 mtr.

Examples of Thilot's products

7-Spray painting

In our in-house paint booth we can carry out your paint jobs, generally reducing your lead-time and cutting handling cost.

If required, external galvanization and sand-blasting facilities are in close range.

8-Assembly

The floor space of the assembly area covers 50*20 mtr. and it is equipped with 2 overhead cranes of 5 tons each. Our experienced mechanics can handle mechanical systems and hydraulics. In close cooperation with a local shop, electrical controls are designed and fitted.
